SUBJECT INDEX

Acoustic waves in solids
  bulk reflection from free surface
    reflection coefficients, calculation of 91-93
    vanishing zero effects at Brewster angles 87-91
  nonclassical boundary conditions in
    comparison with other theories 63-65
    Eulerian and Lagrangian representations and 59-63
    general boundary conditions and 58-59
    surface attention effect on 55-58
  Rayleigh
    capillary waves in liquids and 71-72
    crystal lattice discreteness on surface phenomenon contribution and 77-79
    elastic membrane and 65-66
    nondestructive testing applications and 66
    surface elasticity and surface mass density effect 72-77
    surface tension and 65
  shear, from surface effects
    continuum model and 79-83
    dynamic theories and nonlocal elasticity approach, spatial dispersion in 83-87
  surface
    flexural in thin plates 93-95
    in highly anisotropic crystals 91-106
    laser excitation of, in metals 100-106
    vibrations of sharp-angled wedge, localized 95-100
(Acoustic waves, cont.)
  thermodynamics of surface deformation and
    Gibbs' definition of, surface effects and 445-46
    membrane model of surface effects and 53-55
    surface energy and surface tension 46-48
    surface parameters definition, nonuniqueness in 51-53
    surface stress tensor 48-51
Adsorption, Gibbsian, ion beam modification of metals and 256-257
Aluminum oxide overlayers 355
Amorphous phase formations 293-295
  Hagg rule in 295-297
  ion bombardment of alloy and 313
  ion irradiation experiments 313-314
  negative heat of compound formation in 297-298
  SCT model in 310-314
  shear instability-driven 308-310
  simple structures rule in 298-299
  solubility range of compounds/critical defect density in 304-306
  spike and temperature effects and 306-308
  structural difference rule in 298-299
  quasi-crystalline 292-293
Angle-resolved electron-stimulated desorption 3-36. See also Electron-stimulated desorption ion angular distributions (ESDIAD)

Boundary conditions. See
Nonclassical boundary conditions
Bulk acoustic waves
reflection from free surface
calculation of coefficients, microscopic approach 91
vanishing zero effects at Brewster angles and 87-91

Casade mixing
in ion beam modification 224-229

Deformation. See
Thermodynamics of surface deformation
Densification, ion beam modification and 314
Desorption, angle-resolved electron-stimulated 3-36. See also Electron-stimulated desorption ion angular distributions (ESDIAD)
Diffusion
radiation-enhanced
in ion beam modification 233-239
Display-type analyzer
in angular distribution measurement
advantages of 23-24
ESDIAD pattern comparisons in 25
resistive anode analyzer schematic and 24
in ESD angular anistophy measurement 16-19
compression fields in 17
grids in 18
MCP in 16
output from 18
problems with 18-19
Effective mass
in image states theory
kp dependence of $V_0(z)$ and 145-147
perturbative treatment of 143-144
scattering calculation and 144-145, 171
simple model of 138-143

Electron-stimulated desportion ion angular distributions (ESDIAD)
adsorbate/surface system investigations with
insulators and 7
metals and 5-7
semiconductors and 8
development of
ion studies in 3-4
Menzel-Gomer-Redhead model in 3
dynamical behavior PF_3/Ni(111)
temperature and coverage dependencies of ESDIAD patterns and 30-32
thermal effects in 32-33
experimental methods in 15-16
digital display-type analyzer 16-23
ellipsoidal mirror analyzer 25-26
quadrapole mass spectrometer 19-20
time of flight analyzer 20-23
H_2O on Ru(001)
bilayer structure and ESDIAD pattern analysis in 29-30
LEED studies of 27
thermal desorption spectra of 27, 28
water bonding geometries schematic and 28
insulators and, H/diamond C(111)
charging effects and ESDIAD measurement 33-34
ESDIAD image and 34
relationship study and 34-35
theory of
excited states in 8-11
ground state geometries and 11
image potential interaction and reneutralization and 12-15
Ellipsoidal mirror analyzer (EMA), in angular distribution measurement 25-26

EMA. See Ellipsoidal mirror analyzer
Epitaxy. See also Field electron emission microscopy (FEEM; Field ion microscopy (FIM)
  definition of 174-175
  metals on metal substrates
    comparison of FEEM and FIM 177, 178-179, 192-194, 205
    Cu/W and 192-193
    directional alignment and 181-184, 190-191
    FEEM studies of 179-184, 201, 202, 203, 204, 206, 207, 208
    FIM studies of 184-188, 205
    growth of 3-D crystals in 180-182, 185, 206
    nucleation of 3-D crystals and 179-180, 183, 188-190, 210
    shearing process in 191
    temperature in 180-181
    Volmer-Weber growth mode and 192
ESDIAD. See Electron-stimulated desorption ion angular distributions
Excited states
  electron-stimulated desorption and 8-9
  ESDIAD and
    adiabatic and diabatic states differentiation in 11
    quantum chemical calculation in 9-10
FEEM. See Field electron emission microscopy
Field electron emission microscopy (FEEM)
  in epitaxy studies 183-184
    of bcc/Re 204
    of bcc/W 202
    of Cu/W 187-188, 192-193
    of fcc/W 201
    FIM and 177, 178-179, 192-194, 205
  grain orientation and 181-184
  growth of 3-D crystals in 180-182, 206
    of hcp/W 203
  nucleation phenomeon and 179-180, 183, 188-190, 210
  specific features of
    probe field effects 176-177
    specimen requirements 175
    surface curvature characterization 176, 177-178, 205
    tubes in 182, 209
Field ion microscopy (FIM)
  in epitaxy studies 184-185
    atom impingement in 185
    atomic order in 186
    of Cu/W 187-188
    field evaporation capability of 187-188
    shearing process in 191
    temperature in 180-181, 186-187
  FIM-FEEM techniques compared 177, 178-179, 192-194, 205
  in metal oxide overlayer studies 351
Films, metal oxide 337-339. See also Metal oxide overlayers
FIM. See Field ion microscopy

Grain growth, ion-induced, of surface metal 314-317
Ground state geometries
  for adsorbate/surface system
    ESDIAD patterns and 11

H on diamond C(111)
  ESDIAD and
    charging effects and 33-34
    relationship study and 34-35
H_2O on Ru(001)
  ESDIAD and
    bilayer structure and patterns analysis 29-30
    H_2 bonding geometries schematic 28
    LEED studies of 27
    thermal desorption spectra of 27, 28

Hagg rule, in amorphous phase formation 295-297

IBA/ED. See Ion beam assisted/enhanced
Image potential interaction
  ESDIAD curves and 12-14
  polar angle of desorbing ions and 12-13
  reneutralization effects and 14-15
  on stepped surfaces 14
Image states at metal surfaces, theory of 112-152. See also Image states theory
Image states theory
  effective mass in
    kp dependence of $V_B(z)$ and 145-147
    perturbative treatment of 143-144
    scattering calculation and 144-145, 171
    simple model of 138-143
  lifetimes in
    calculations and 147-149, 162
    effects and 147
    STEM and 152
    two-dimensional electron gas and 152
    wave function penetration in 149-152, 162
  Rydberg series integrity, qualitative arguments for 118-121
  Rydberg states analytical model
    barrier phase charge o_B in 123-125
    binding energies numerical results in 125-126, 160, 166-167
    crystal phase change o_c in 122-123
    image potential in vicinity of surface 165
    $o_B(E)$ energy dependence and 164
    simple model results discussion 126-128, 167
    simple ideas in $\dot{\varphi}_B(E)$ energy dependence 164
    $\dot{\varphi}_B(E)$ variation, for 1/z barrier 117-118
    order of magnitude 116-117
    phase shift model for surface states 114-115
    significance of [illegible] and 115-116
  surface barrier $V_B(z)$
    density-functional 137-138, 170
    parametrised models and 136-137
    self-energy formalism and 131-136, 161, 168-170
    semiclassical approximation of 128-131, 168
Instability, of metal surface, ion beam modification and 318-322
Ion beam assisted/enhanced (IBA/ED) ion beam modification 215, 217
Ion beam modification of metals
  advantages of 213
  compositional changes and 218-220
    adsorption, Gibbsian 256-257
    cascade mixing 224-229
    chemical effects 214, 229-233
    diffusion, radiation-enhanced 233-239
    ion implant redistribution during implantation 268-270
    phenomenological model for 262-268
    recoil implantation 220-224
    segregation, radiation-induced 239-256
    sputtering 258-262
  microstructural changes 213-214, 270-271
    amorphous phase formation 293-314
    metastable phases and 286-293
    phase stability 271-285
  surface microstructural changes
    densification 314

(Ion beam modification, cont.)
grain-growth, ion-induced 314-317
instability 318-322
in texture 317-318
techniques for
direct ion implantation 214-216
ion beam assisted/enhanced deposition 215, 217
ion beam mixing 214, 215, 216-217
plasma source ion implantation process 215, 217-218
Ion scattering spectroscopy (ISS), in metal oxide overlayer studies 345
Iron oxide on platinum (111) (FeO_2/Pt, [111])
structure of 350
ISS. See Ion scattering spectroscopy

Laser, in excitation of surface acoustic waves 100-106

Lifetimes
in image states theory
calculations in 147-149, 162
effects in 147
half-line widths of first image-potential-induced surface state 162
wave function penentration in 149-152, 162

Mass. See Effective mass, in image state theory
Metal oxide overlayers
chemical properties of
AlO_2 and 355
CO_2/Pt(111) 355-356
oxidation of 356
surface techniques in 352
TiO_2 and 352-355
ZrO_2/Pt(100) 355
electronic properties of
FEM and 351
FIM and 351
STM and 351
UPS and 351-352
work function measurements and 351

(Metal oxide..., cont.)
nucleation and growth of
growth modes and 342, 345, 347
ISS and 345
layer-by-layer 347
Stranski-Krastanov mechanism and 348
surface titration with reactive gas and 345
three-dimensional 347-348
uptake curve measurements and 344-345, 346
preparation of 337-339
stability of
decomposition and 343
diffusion and 344
evaporation and 343-344
stoichiometry of
examples of 341-342
oxygen partial pressure and 339-341
overlayer-substrate bond and 351
phase separation and 341, 343
structure of
FeO_2/Pt(111) 350
Leed analysis of 349
neodymium O_2/Cu(100) 350
TiO_2/Ru(0001) 350
Zr/O_2/Pt(100) 349-350

Neodymium oxide on copper (100)
structure of 350
Nonclassical boundary conditions
acoustic waves in solids and Eulerian and Langrangian representations 59-63
general boundary conditions and 58-59
surface tension effect on 55-58
theoretical comparisons in 63-65
Nucleation and growth of metal oxide overlayers
growth modes and 342, 345, 347
ISS and 345
layer-by-layer 347
Stranski-Krastanov mechanism of 348

(Nucleation...metal oxide...)
surface titration with reactive gas and 345
three-dimensional 347-348
uptake curve measurements and 344-345, 346

Order<--> disorder transformations
metastable phases and 287-288
phase stability changes and 280-281
Oxidation. See Metal oxide overlayers

PF_3 on Ni(111)
dynamical behavior of ESDIAD
temperature and coverage dependencies of 30-32
thermal effects in 32-33
Phases
ion beam modification and
amorphous phase formation 293-314. See also Amorphous phase formations
metastable 286-293. See also Metastable phase(s)
stability of 271-285. See also Phase stability
Phase stability
coarsening and 278-279
precipitation of implanted gases and 279-280
order-disorder transformations 280-281
precipitate growth and stability and 274-278
precipitate nucleation and 271-274
precipitation of implanted gases and 279-280
redistribution and composition modifications and 281-285
Plasma source ion implantation (PSII) process, of ion beam modification 215, 217-218
PSII. See Plasma source ion implantation (PSII) process

Quadrapole mass spectrometer
in angular distribution measurement
advantages of 19-20
fixed mass spectrometer ESDIAD system in 19

Rayleigh waves
surface phenomena influence on
capillary waves in liquids and 71-72
crystal lattice discreteess on 77-79
elastic membrane and 65-66
elasticity and mass density effect and 72-77
Stonely wave propagation and 66
surface tension dispersion of 66-71
testing applications and, nondestructive 66
Recoil implantation, in ion beam modification 220-224
Rydberg series, integrity of, qualitative arguments for 118-121
Rydberg states
analytical model of
barrier phase charge in o_s in 123-125, 164, 165
binding energies numerical results in 125-126, 160, 166-167
crystal phase charge o_c in 122-123
simple model results 126-128, 167

Scanning tunneling spectroscopy (STM), in metal oxide overlayer studies 351
SCT. See Segregation charge transfer (SCT) model
Segregation
radiation-induced 239-241
damage distribution and bombarding ion effects 253-256
defect-solute complexes and 244-246

(Segregation...radiation...)
dose dependence 249
homogeneous alloys 253
inverse Kirkendall effect of 241-243
mechanisms of 241-246
solute size effect 246-248
temperature dependence 249-251
Segregation charge transfer (SCT) model, in amorphous phase formation 310-313
Shear waves
surface acoustic waves in solids and
continuum model of 79-83
role of spatial dispersion and 83-87
Simple structures rule, in amorphous phase formation 298-299
Sputtering
in ion beam modification of metals
basic model 258-259
preferential 259-262
Stability
of metal oxide overlayers
decomposition and 343
diffusion and 344
evaporation and 343-344
STM. See Scanning tunneling spectroscopy
Structural difference rule, in amorphous phase formation 299-303
Surface acoustic waves
in anisotropic crystals
flexural waves in thin plates and 93-95
laser excitation of, in metals 100-106
vibrations of sharp-angled wedge, localized 95-100
Surface barrier $V_B(z)$
semiclassical approximation of 128, 131, 168
density-functional 137-138, 170
parametrised models 136-137
self-energy formalism and 131-136, 168-170
Surface deformation. See Thermodynamics of surface deformation

Texture, ion beam modification and 317-318
Thermodynamics of surface deformation
nonuniqueness in parameters definition 51-53
surface effects and
Gibbs' definition of 45-46
membrane model of 53-55
surface energy and surface tension in 46-48
surface stress tensor in 48-51
Thin ordered transition metal oxide films, on single crystals, preparation of 336-357. See also Metal oxide overlayers
Time-of-flight (TOF) analyzer
in angular distribution measurement
advantages of 23
background effects and 22-23
for ESDIAD patterns 21
for ESDIAD products 21-22
schematic of 20-21
Titanium oxide on ruthenium (0001) (TiO_2/Ru[0001])
structure of 350
Titanium oxide overlayers 352-355
TOF. See Time-of-flight (TOF) analyzer

Ultra-violet photoelectron spectroscopy (UPS), in metal oxide overlayer studies 351-352
UPS. See Ultra-violet photoelectron spectroscopy

Zirconium oxide on platinum (100) (ZrO_2/Pt[100]) 355
structure of 349-350
